Configuring default route to the routes

Steps

1. A topology was created using 3 Routers, 2 Switch and 2 PCs connected to each switch using copper straight through connections and detail DCE connections.
2. Default gateway and unique ip address were configured for each PC.
3. IP address was configured for each interface using CLI.
4. Pinging PC2 from PC0 gave destination host unreachable.
5. ip routes for each route was viewed using the command `show ip route`.

6. Static ip route was configured for routes using CLI commands.

7. Default ip route was configured for route 0 and route 2 using CLI commands.
